

# VENN DIAGRAMS

**CALCULATE AND INTERPRET CONDITIONAL PROBABILITIES THROUGH REPRESENTATION USING EXPECTED FREQUENCIES WITH TWO-WAY TABLES, TREE DIAGRAMS AND VENN DIAGRAMS (higher tier)**

**Venn diagrams**

In this section we introduce the ideas of Venn diagrams and probability. A *Venn diagram* is a way of representing information visually.

Consider two events A and B,

**EXAMPLE 1**

The Venn diagram shows information of 150 patients in a local surgery. They were asked if they took any medication for cholesterol (C) or blood pressure (B).

- (a) How many patients took both of the medications?
- (b) How many patients took only one medication but not both?
- (c) What does 21 represent on the Venn diagram?

- (a) 57 ← Look at the number in the overlap of the circles
- (b)  $24 + 48 = 72$  ←  $24 = C$  only as it is in circle C but not also in circle B  
 $48 = B$  only as it is in circle B but not also in circle C
- (c) 21 represents the number of patients who took no medication. ← 21 is not in any of the circles

**NOTE:** If you add all the numbers you get the total number of patients.

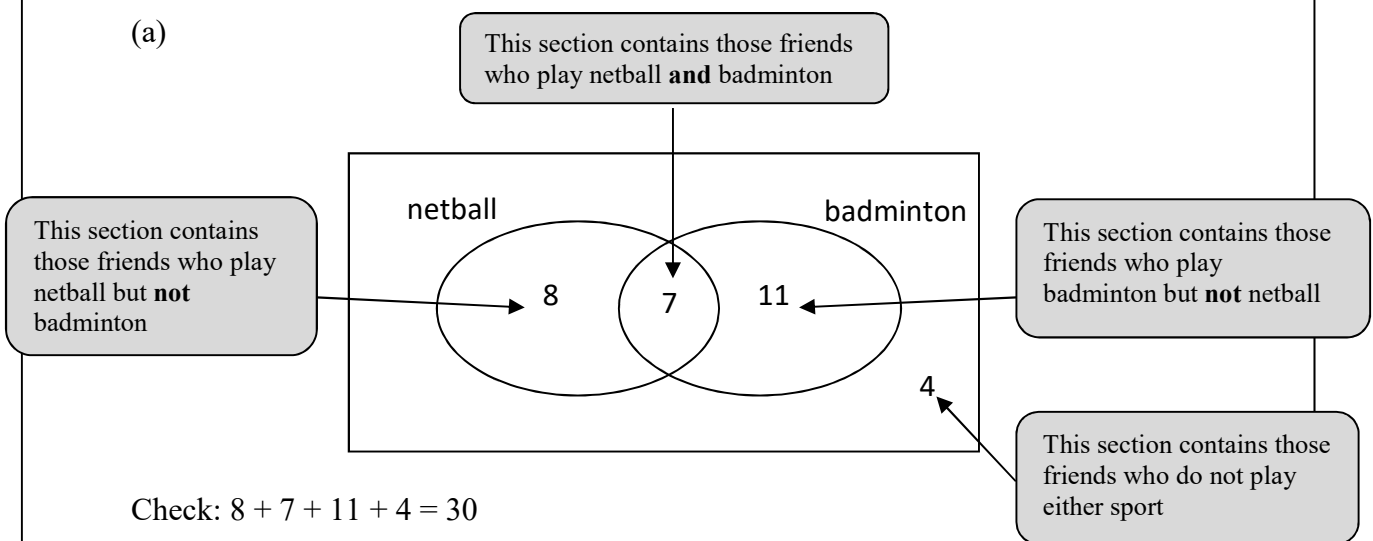

$$24 + 57 + 48 + 21 = 150$$

### EXAMPLE 2

In a group of 30 friends, 15 play netball, 18 play badminton, 7 play netball and badminton.

- Represent this information on a Venn diagram.
- Work out the probability that a friend plays netball only.
- Work out the probability that a friend plays badminton only.
- Work out the probability that a friend plays netball or badminton but not both.
- Work out the probability that a friend does not play netball or badminton.

(a)

**NOTE:** Always start from the overlap and then work your way outwards to complete the Venn diagram. Always label your circles.

(b) netball only =  $15 - 7 = 8$   
 probability netball only =  $\frac{8}{30}$

← 15 play netball but 7 play both

← 8 play netball only out of 30 friends

(c) badminton only =  $18 - 7 = 11$   
 probability badminton only =  $\frac{11}{30}$

← 18 play badminton but 7 play both

← Write your answer as a fraction

(d) netball only or badminton only =  $8 + 11 = 19$   
 probability netball only or badminton only =  $\frac{19}{30}$

← Do not include 7 as 7 play both

(e) not netball or badminton =  $30 - (8 + 11 + 7) = 4$   
 probability not netball or badminton =  $\frac{4}{30}$

← 4 is not in any of the circles

### EXAMPLE 3

The following shows the results of a survey on the types of exercise taken by a group of 100 people.

65 run, 48 swim, 60 cycle,  
40 run and swim, 30 swim and cycle, 35 run and cycle  
25 do all three

- (a) Draw a Venn diagram to represent this information.  
(b) Work out the probability that a randomly selected person from the survey  
(i) takes none of these types of exercise      (ii) swims but does not run

**NOTE:** Always start from the overlap and then work your way outwards to complete the Venn diagram. In this case all of them overlap. We need to draw three overlapping circles. Always label your circles.

(a)

4. 40 run and swim but we already have 25 which run and swim so another 15 run and swim

7. 65 run but we already have 15, 25 and 10 which run so another 15 run  
**NOTE** The circle which represents run adds up to 65

6. 48 swim but we already have 15, 25 and 5 which swim so another 3 swim  
**NOTE** The circle which represents swim adds up to 48

1. All three overlap

3. 30 swim and cycle but we already have 25 which swim and cycle so another 5 swim and cycle

2. 35 run and cycle but we already have 25 which run and cycle so another 10 run and cycle

5. 60 cycle but we already have 10, 25 and 5 which cycle so another 20 cycle  
**NOTE** The circle which represents cycle adds up to 60

8. This section represents a person who does not run, swim or cycle so  
 $100 - (15+15+25+10+3+5+20) = 7$

(b) (i) none of these types of exercise = 7

probability none of these types of exercise =  $\frac{7}{100}$

(ii) swims but does not run = 3 + 5 = 8

probability swims but does not run =  $\frac{8}{100}$

7 is not in any of the circles

There are 100 people in total

In circle S but not in circle R

### EXERCISE 1:

1. Sandeep gathered some information about the pet dogs and pet cats in his road.  
There are 100 families in this road.  
68 families have a dog, 42 have a cat and 15 have a dog and a cat.  
No family had more than 1 cat or more than 1 dog.
  - (a) Draw a Venn diagram to represent this information.
  - (b) Find the probability of a family, chosen at random, having neither dog nor a cat.
2. A garage has 50 cars for sale.
  - 15 of the cars have air conditioning and ABS brakes
  - 31 of the cars have air conditioning
  - 17 of the cars have ABS brakesWork out the probability of the cars that do **not** have air conditioning or ABS brakes.
3. A running club has 120 members.
  - 88 of the members take part in road races
  - 55 of the members take part in marathons
  - 17 of the members do not run in road races or in marathonsWork out the probability that a member only takes part in a road race or in a marathon but not both.
4. Anjali asked 60 students in her year group about where they had eaten out in the last month. Here are her results:
  - 26 had eaten in Subfood
  - 11 had eaten in Macdinner and Subfood
  - 12 had not eaten at Macdinner or Subfood
  - (a) Draw a Venn diagram to represent this information.
  - (b) Find the probability of a student who had eaten at Macdinner.
5. 90 people in a sports club were surveyed.
  - 19 play tennis and squash
  - 50 play tennis
  - 32 play squash
  - (a) Draw a Venn diagram to represent this information.One person is chosen at random.
  - (b) Work out the probability that
    - (i) the person chosen does not play tennis
    - (ii) the person chosen plays tennis or squash or both.

6. All the members of a group of 35 students belong to at least one club.  
There are 3 clubs: chess, drama and art.
- 8 of the students belong to only the art club
  - 6 of the students belong to all 3 clubs
  - 3 of the students belong to the chess and art clubs but not to the drama club
  - 18 of the students belong to the art club
  - 3 of the students belong only to the chess club
  - 4 of the students belong only to the drama club
- (a) Work out the probability that a student belongs to the chess club and to the drama club but not to the art club?
- (b) Work out the probability that a student belongs to the chess club.
7. In a group of 100 students
- 42 study Statistics
  - 40 study Mathematics
  - 50 study Physics
  - 21 study Mathematics and Physics
  - 19 study Statistics and Physics
  - 17 study Statistics and Mathematics
  - 5 study all three
- (a) Draw a Venn diagram to represent this information.
- One of the students is picked at random.
- (b) Find the probability that this student studies only **one** of these subjects.
8. 140 people were asked in a tasting survey to say which, if any, of three cakes they liked.  
Here are the results.
- 86 people liked cake *A*
  - 93 people liked cake *B*
  - 76 people liked cake *C*
  - 52 people liked cakes *A* and *B*
  - 51 people liked cakes *B* and *C*
  - 43 people liked cakes *A* and *C*
  - 30 people liked all three cakes.
- (a) Draw a Venn diagram to show this information.
- A person is chosen at random from those who took part in the survey.
- (b) Find the probability that this person
- (i) did not like any of the three cakes,
  - (ii) liked cake *A* but not cake *B*.

9. A group of 200 adults were asked which types of magazines they read.  
Their replies showed that

82 read Sports magazines

80 read Garden magazines

84 read Fashion magazines

36 read Sports magazines and read Garden magazines

31 read Sports magazines and read Fashion magazines

25 read Garden magazines and read Fashion magazines

14 read Sports magazines and read Garden magazines and read Fashion magazines

One of the adults asked is to be chosen at random.

Find the probability that this adult

- (a) reads none of these types of magazine,
- (b) reads exactly two of these types of magazine.

## Conditional probability using Venn diagrams

**Conditional probability** is the probability of an event occurring **given** that another event has occurred.

For example,

- the probability of David studying GCSE mathematics given that he is studying GCSE physics,
- the probability that I will pay my gas bill given that I have just been paid,
- the probability that my students will turn up to class given that it is a rainy day.

The emphasis is that the probability is influenced by something that has already happened.

$P(A | B)$  means the probability of A occurring, given that B has already occurred.

### EXAMPLE 4

In a class of 29 girls

18 girls play netball

13 girls play hockey

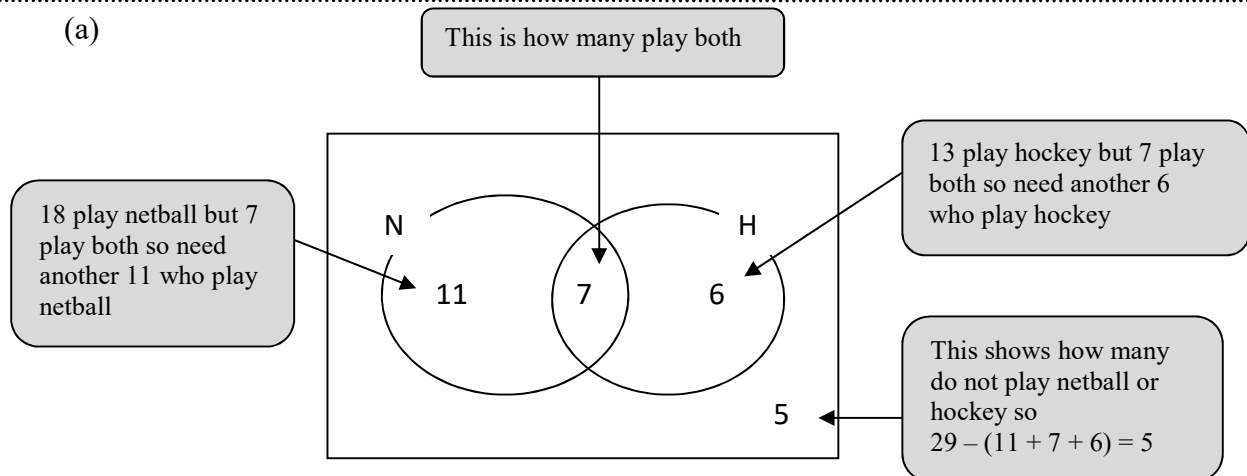

7 girls play both

(a) Show this information on a Venn diagram.

One of these girls is picked at random.

(b) Write down the probability that this girl plays hockey given that this girl also plays netball.

(a)

(b) 18 girls play netball

← Given plays netball so look at the netball circle only

7 of these the netball players also play hockey

← We want to know how many of these netball players also play hockey

$$\text{Probability plays hockey given plays netball} = \frac{7}{18}$$

### EXAMPLE 5

In a group of 40 children there are 19 who can swim and 16 who can ride a bike. There are 5 children who can swim and ride a bike.

A child is selected at random.

(a) Find the probability that this child cannot swim or ride a bike.

Another child is selected at random.

(b) Given that this child can ride a bike, work out the probability that this child can swim.

(a)

This shows how many can swim and ride a bike

It is helpful to draw a Venn diagram to show this information.

Answer:  $\frac{10}{40}$

10 of the 40 children cannot swim or ride a bike

**NOTE:** You do not need to cancel the answer to  $\frac{1}{4}$

(b)  $5 + 11 = 16$  ride a bike

Given rides a bike so look at the bike circle only

5 of these bike riders also swim

We want to know how many of these bike riders also swim

Probability that a child can swim given rides a bike =  $\frac{5}{16}$

### EXAMPLE 6

Charles asked 100 people which of the films Ghost, Titanic and Shrek they have watched. Here is some information about his results.

- 55 had watched Ghost.
- 58 had watched Titanic.
- 60 had watched Shrek.
- 36 had watched Ghost and Shrek.
- 35 had watched Ghost and Titanic.
- 37 had watched Titanic and Shrek.
- 20 had watched all three films.

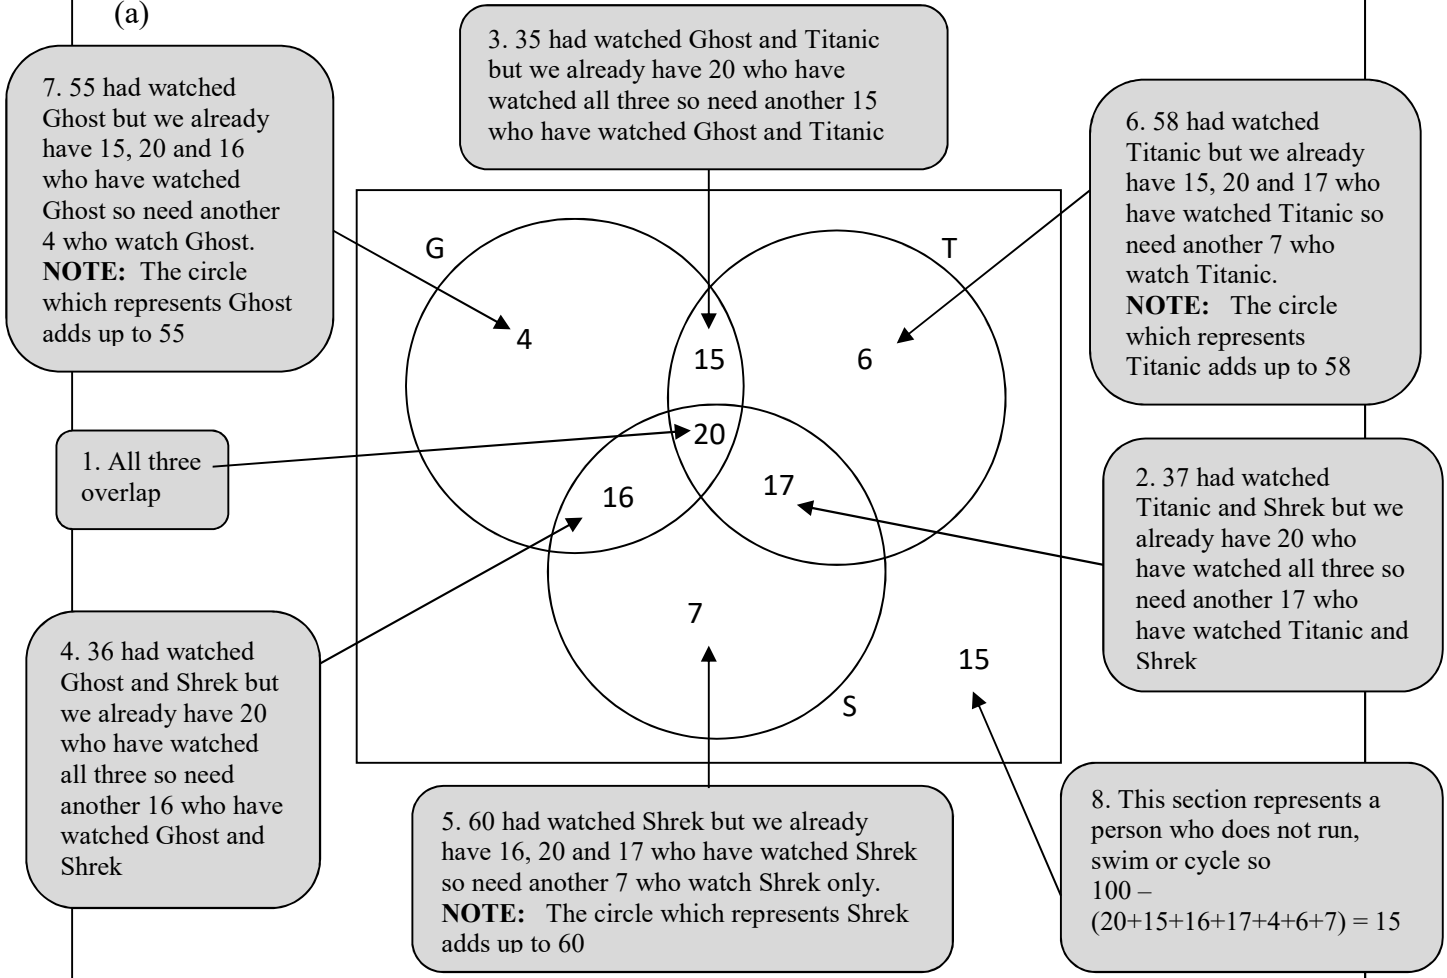

(a) Draw a Venn diagram to show this information.

Charles picks, at random, one of these 100 people.

(b) Given that the person had watched Titanic, work out the probability that this person had also watched Ghost.

Fill in the numbers on the Venn diagram in the order shown below ... ie starting with 20 watching all 3 films.

(a)

(b) Number who watched Titanic = 58

Given watched Titanic so look at the Titanic circle only

Of these 58,  $15 + 20 = 35$  had also watched Ghost.

Look at the overlap of G and T

Probability that this person had also watched Ghost =  $\frac{35}{58}$

**EXERCISE 2:**

- 90 children were asked what type of bottled water they took to school. Their replies are as follows:  
52 took sparkling water  
36 took still water  
14 took both types of water
  - Show this information on a Venn diagram.
  - Given that a child takes sparkling water, find the probability that this child also takes still water.
  - Given that a child takes still water, find the probability that this child also takes sparkling water.
- In a group of 40 students 6 are left-handed, 18 have size 8 feet and 2 are left-handed with size 8 feet.
  - Find the probability that a student is left-handed or has size 8 feet,
  - Given that the student is left-handed, find the probability that a student has size 8 feet.
- In a survey 100 people were asked whether they watched snooker or cricket when it was on TV. 20 watched neither, 75 watched snooker, 32 watched cricket.  
A person is selected at random.
  - Find the probability that this person watched both cricket and snooker.
  - Given that this person watched snooker, work out the probability that this person watched cricket.
- A person's blood group is determined by whether or not it contains any of 3 substances  $A$ ,  $B$  and  $C$ . A doctor surveyed 300 patients' blood and produced the table below.

Blood contains	Number of patients
Only $C$	100
$A$ and $C$ but not $B$	100
Only $A$	30
$B$ and $C$ but not $A$	25
Only $B$	12
$A$ , $B$ and $C$	10
$A$ and $B$ but not $C$	3

- Draw a Venn diagram to show this information.
- Find the probability that a randomly chosen patient's blood contains substance  $C$ .

Harry is one of the patients.

- Given that his blood contains substance  $A$ , find the probability that his blood contains all 3 substances.

5. There are 180 students at a college following a general course in computing. Students on this course can choose to take up to three extra options.

112 take systems support  
70 take developing software  
81 take networking  
35 take developing software and systems support  
28 take networking and developing software  
40 take systems support and networking  
4 take all three extra options

- (a) Draw a Venn diagram to show this information.

A student from the course is chosen at random.

- (b) Find the probability that this student takes  
(i) none of the three extra options,                      (ii) networking only.

Students who want to become technicians take systems support and networking.

- (c) Given that a randomly chosen student wants to become a technician, find the probability that this student takes all three extra options.

6. 100 people were asked which sports they watched on television. Here are the results.

36 people watched cricket  
28 people watched rugby  
36 people watched football  
17 people watched both cricket and rugby  
19 people watched both cricket and football  
15 people watched both rugby and football  
10 people watched all three sports

- (a) Draw a Venn diagram to show this information.

One of the 100 people is selected at random.

- (b) Given that a person watches cricket, find the probability that this person also watches football.  
(c) Given that a person watches at least one of the sports, find the probability that this person watches all three.

7. The following shows the results of a juice tasting survey of 100 people.

96 like apple juice

93 like orange juice

96 like mango juice

92 like apple juice and orange juice

91 like orange juice and mango juice

93 like apple juice and mango juice

90 like all three

- (a) Draw a Venn diagram to represent this data.
- (b) Find the probability that a randomly selected person from the survey likes
  - (i) none of the three juices,
  - (ii) apple juice but not orange juice.
- (c) Given that a person from the survey likes apple juice, find the probability that the person likes mango juice.

# ANSWERS

## Exercise 1

(b)  $\frac{5}{100}$

$\frac{17}{50}$

$$(88 - x) + (55 - x) + x + 17 = 120$$

$$x = 40$$

$$\frac{48 + 15}{120} = \frac{63}{120}$$

(b)  $\frac{22 + 11}{60} = \frac{33}{60}$

(b)(i)  $\frac{40}{90}$

(ii)  $\frac{63}{90}$

6. (a)

$$\frac{10}{35}$$

(b)  $\frac{22}{35}$

7. (a)

(b)  $\frac{11+7+15}{100} = \frac{33}{100}$

8. (a)

(b)(i)  $\frac{1}{140}$       (ii)  $\frac{21+13}{140} = \frac{34}{140}$

9. (a)  $\frac{32}{200}$

(b)  $\frac{17+22+11}{200} = \frac{50}{200}$

## Exercise 2

1. (a)

(b)  $\frac{14}{52}$

(c)  $\frac{14}{36}$

2.

(a)  $\frac{20}{40}$

(b)  $\frac{2}{6}$

3.

$$(75 - x) + x + (32 - x) + 20 = 100$$

$$x = 27$$

(a)  $\frac{27}{100}$

(b)  $\frac{27}{75}$

4. (a)

(a)  $\frac{100 + 10 + 25 + 100}{300} = \frac{325}{300}$

(b)  $\frac{10}{30 + 100 + 10 + 3} = \frac{10}{143}$

5. (a)

(b)(i)  $\frac{16}{180}$       (ii)  $\frac{17}{180}$

(c)  $\frac{4}{40}$

6. (a)

(b)  $\frac{19}{36}$       (c)  $\frac{10}{59}$

7. (a)

(b)(i)  $\frac{1}{100}$       (ii)  $\frac{4}{100}$

(c)  $\frac{93}{96}$

**Practice Problems**

1. A survey of 230 exotic pet owners shows that:

- 78 people own tarantulas
- 81 people own chinchillas
- 63 people own pot-belly pigs
- 46 people own chinchillas and tarantulas
- 62 people own exactly two of these exotic pets

31 people own tarantulas and pot-belly pigs  
16 people own tarantulas, chinchillas, and pot-belly pigs

Questions to solve:

- How many people do not own tarantulas, chinchillas, or pot-belly pigs?
- How many people own pot-belly pigs?
- How many people only own chinchillas?

2. A study of 200 books written since 2000 shows that there are three common character types: the villain, the female heroine, and the computer genius.

128 books have a villain or a female heroine  
82 books have a female heroine  
68 books do not have a female heroine, a villain, or a computer genius  
54 books have a villain and a computer genius  
28 books have all three character types  
49 books have a female heroine and a computer genius  
51 books have a villain and a female heroine

Questions to solve:

- How many books include only a computer genius and a villain?
- How many books do not have a computer genius?
- How many books have a female heroine only?

3. A survey of 300 summer movie patrons found that most movie patrons viewed one of three types of movies: comedy, romance, and action.

Let C= represent summer comedies

R= represent summer romance movies

A= represent summer action movies

$$n(C)=156$$

$$n(R)= 106$$

$$n(A)=133$$

$$n(C \cap R \cap A)= 8$$

$$n(C \cap R)=53$$

$$n(R \cap A)=41$$

$$n(C \cap A)=87$$

Questions to solve:

- How many summer movie goers did not see a comedy, romance, or action movie?
- How many summer movie goers saw a comedy or action movie?
- How many summer movie goers only saw a romance movie?

4. Draw an appropriate Venn diagram, and analyze the known information below.

$$n(A \cap B)=23, n(A \cap B \cap C)=9, n(A \cap C)=28, n(B \cap C)=11, n(A \cap C')=22$$
$$n(B \cap C')=27, n(A' \cap B' \cap C')=17, n(C)=37$$

Solutions

1. a. 102, b. 63, c. 18

2. a. 26, b. 121, c. 10

3. a. 78, b. 202, c. 20

4.

Sưu Tầm và biên soạn  
N.V. LOI
